

# EURO KEDER

## No Weld Puckering

by RF welding the keder, the distance added to the fabric edge by the keder is very consistent. This results in more accurate panel widths and allows narrower tolerances, resulting in tighter clearspan roofs

## Time Saving

Thicker fibers means better sliding during installation

RF welding keeps keder straight which makes manufacturing panels easier

## Less Wear

Thicker fibers means less wear from installation and dismantling

Perfect for rental tents

Eurokeder is a 2200 DTEX RF welded keder product imported from Europe

Contact us for questions or ordering info or visit us at [www.eurokeder.com](http://www.eurokeder.com)

Fax: 1-866-864-9671

E-Mail: [sales@eurokeder.com](mailto:sales@eurokeder.com)

We will gladly send samples

## Coated Keder

Keder with coated flag allows welding on the flag and stays cleaner. It also allows for repairs without cutting the keder flag. Available from inventory

We also offer repair keder which welds onto existing panels without an RF welder
