Other sizes available – please contact us

- Diameters 6mm, through 15mm
 - Colors: white, silvergrey, black standard - any fabric as custom production
 - White can be opaque and translucent
 - Weld size and Flag size customizable
- Black coated sewing keder is suitable for long term UV exposure

2200 DTEX: less wear and slides better

RF¹ Welded: straight – no weld puckering

Better accuracy in panel width*

Higher productivity during install*

Better return on investment ; panels last longer*

Higher productivity in the shop*

Requires less repair*

*Compared with 1100 DTEX, hot wedge welded keder

¹ Radio Frequency

2200 DTEX = 2000 Denier

Warranty: 5 year limited warranty – details available upon request

Packed in cardboard boxes.

All Eurokeder styles listed are inventory items and are opaque (unless noted) for maximum versatility

DOUBLE COATED KEDER

Double Coated Keder is manufactured by wrapping a regular coated fabric around an extruded core, then adding a layer of traditional keder fabric on top of it, but without covering the flag.

Benefits:

- higher resistance against wear: 4 layers in the weld area
- flag is coated, so it stays clean and can be welded on
- resistance against UV for long term projects
- easy to repair or replace when damaged
